

# SANT'ANNA BIO BOTTLE

---

## Properties list:

biodegradability and compostability  
end-user packaging  
range of products  
new product  
bottle  
identity by colour  
corrugated  
eco-friendly  
water  
bio plastics

Sant'Anna Bio Bottle is made from plants materials and is compostable, biodegrading completely in 80 days in appropriate composting sites. Less petroleum, fewer CO<sub>2</sub> emissions, more energy available. The use of renewable resources instead of oil and an eco-sustainable production method are helping fight the greenhouse effect: 650 million of Sant'Anna Bio Bottles, produced in just one week, save 176.000 barrels of oil, enough to heat a city of 520.000 people for a month, and reduce CO<sub>2</sub> emissions equal to those by a car driving around the world 20.082 times in a year. The bottles can be disposed of with organic waste. Sant'Anna Bio Bottle uses Ingeo™ plastic made from plants instead of petroleum.
