- refill system
- carrying system
- product accessibility
- single product
- end-user packaging
- water
- new product
- opening and closure systems
- metals
- contemporary
- bottle
- identity by shape

Produced from a single component that is seamless and has no weak points, SIGG bottles are durable and virtually unbreakable.

Due to SIGG's special, proprietary internal coating, these high-tech bottles are resistant to fruit juice acids, energy drinks, alcohol and virtually any consumable beverage.

SIGG bottles are manufactured in an ecologically-friendly environment and are 100% recyclable after their very long lives. In fact, most SIGGs in Europe are still being used 10-20 years after purchase.

Combining function and fashion, SIGG bottles come in over 100 unique designs.

Utilizing 30 independent artists from around the world, SIGG Switzerland introduces new styles every year. And the leak-proof caps are interchangeable creating over 1,000 possible combinations.
