

# GALILEO GALILEI SECTOR PACK

---

## Properties list:

reusability  
end-user packaging  
single product  
concept  
office and stationery  
folding carton  
identity by shape  
cardboard and paper  
contemporary  
identity by colour  
identity by illustration

A sector is a mathematical tool invented by Galileo Galilei, precursor of the calculation rulers which accompanied the technicians until the last quarter of 20th century. A double box makes an 'english type' sector, totally functional, and also a container for the compass necessary for its use. It was developed as an institutional gift.
