

# GALILEO GALILEI SECTOR PACK

---

## Properties list:

- reusability
- end-user packaging
- single product
- concept
- office and stationery
- folding carton
- identity by shape
- cardboard and paper
- contemporary
- identity by colour
- identity by illustration

A sector is a mathematical tool invented by Galileo Galilei, precursor of the calculation rulers which accompanied the technicians until the last quarter of 20th century. A double box makes an 'english type' sector, totally functional, and also a container for the compass necessary for its use. It was developed as an institutional gift.
