

UPACKS

Properties list:

- logistic optimisation
- industrial packaging
- end-user packaging
- single product
- concept
- other non-food products
- other shapes
- cardboard and paper
- hand-made
- eco-friendly
- debossed, embossed
- identity by shape

It seems a box is always too big or small so designer Patrick Sung came up with flat sheets of recyclable corrugated cardboard called the Universal Packaging System or UPACKS. A single sheet of corrugated cardboard can be easily folded into infinite shapes (thanks to a perforated triangular grid) to adapt to any object. It's ideal for deliveries, because it minimizes the space required to stock it on the trucks.
