

SPOON CONTAINER

Properties list:

- unit dose packaging
- ready to use
- range of products
- concept
- pharmaceuticals
- confectionery and sweetness
- dispensing systems
- identity by shape
- metals
- gable top

Spoon Container is a spoon that integrates the contents with the container, the packaging with the use-function. A quick packaging/tool easy to use, clean and hygienic due to the thin film is removed manually. It is a perfect packaging in different situations: designed to give syrups to children, it could be part of a military equipment or of a kit for lunches served in a plane.
