other non-food products
bag
plastics
cardboard and paper
ironic
contemporary
identity by colour
identity by abstract shapes

These are sandwich bags that have green fungus-like patches printed on both sides of their plastic body, making your fresh lunch look spoiled. The Lunch bag's zip-lock also seals the delicious aroma inside the bag which prevents your food from being sniffed by the greedy nose of your ever hungry co-worker.

Made out of toxic-free, recyclable LDPE, these bags are regular sandwich sized and come in a box of 25 fungi attacked plastic zip-locks. Here, let us also tell you that it contributes a percentage of its earnings to charities which empower people and enhance their creative side.
