

Properties list:

- end-user packaging
- new product
- single product
- dispensing systems
- product accessibility
- pouch
- transparent
- smooth
- plastics

Retortable for microwave oven. Convenience Food isn't just a steadily growing market with potential, it's also a market that fosters plenty of innovations in packaging. We work closely with our customers to stay abreast of developments, and to help you market your products attractively. NeoSteam® is a flexible packaging solution that uses an adaptable steam-valve which makes it possible to steam chilled ready meals, vegetables, pasta, rice, fish, shellfish, etc., directly in the microwave. The traditional puncturing or opening of the packet ready meal is no longer necessary, which shortens preparation time and ensures that the product remains moist. Thanks to our special valve technology, the product is cooked under pressure, which means flavour, precious minerals and vitamins are preserved.
